PRODYNAMICS

↑ output

improved throughput, reduced downtime

CASE STUDY · FMCG MANUFACTURING

Higher throughput and less downtime for an FMCG enterprise

The challenge

Production, planning and the wider business ran on disconnected systems, making it hard to keep lines running and output predictable.

What we did

- Designed an integrated Microsoft Dynamics 365 solution around how production actually runs.
- Connected production with planning and the wider business so everyone worked from the same data.
- Supported the operations team through go-live and adoption.

The outcome

The enterprise improved throughput, reduced downtime and increased output.

What we'd add today, AI-first

We'd link production data to Microsoft Fabric so a planning agent can flag likely disruptions early, for planners to act on.

INDUSTRY

FMCG manufacturing

PLATFORM

Microsoft Dynamics 365

SERVICES

Integrated solution design, implementation

RESULT

↑ output — improved throughput, reduced downtime
